PROFESSIONAL SUMMARY

Software Engineer with 2+ years of experience in enterprise application development and hands-on internship experience in modern, AI-enabled software engineering. Proficient in Java, Spring Boot, Python, SQL, REST APIs, microservices, and cloud technologies, with experience across application modernization, automated testing, CI/CD, data pipelines, and production support. Skilled in Agile SDLC and building scalable, secure, and maintainable software solutions across enterprise environments.

EDUCATION

Avila University

Master of Science in Computer Science; GPA: 3.62/4.00

Kansas City, MO

Aug 2026

EXPERIENCE

Technology Internship Program - Wells Fargo — Irving, TX

June 2026 – Aug 2026

- Engineered scalable REST APIs and microservices using Java, Python, JavaScript, and SQL, applying reusable design patterns and secure development practices across enterprise applications.
- Leveraged enterprise-approved AI-assisted development tools for code generation, refactoring, automated test creation, documentation, and rapid prototyping while validating outputs against architecture, security, and data-governance standards.
- Contributed to data and AI/ML solutions using Python, Pandas, NumPy, SQL, and data pipelines to support analytics, intelligent automation, predictive insights, and application-integrated AI capabilities.
- Collaborated with engineering, architecture, product, and platform teams on cloud-native solutions across OpenShift, Azure, and Google Cloud, utilizing GitHub and CI/CD workflows to support reliable software delivery.

Member Technical - ADP

Aug 2022 – Aug 2024

- Analyzed system requirements and collaborated with senior engineers to design, develop, and enhance Java/Spring Boot backend components for enterprise payroll applications, delivering scalable and maintainable solutions.
- Resolved and optimized code across 50+ backend production issues through debugging and root-cause analysis, improving application reliability and reducing system downtime.
- Partnered with product owners, QA engineers, and cross-functional stakeholders throughout the SDLC, supporting testing, deployment, production validation, code reviews, and Agile Scrum delivery while communicating technical solutions to business stakeholders.
- Managed application code using Git/Bitbucket and supported Jenkins CI/CD deployments and API validation, while maintaining technical documentation, deployment artifacts, and installation/maintenance procedures.

ENTERPRISE & ACADEMIC PROJECTS

AI-Assisted Enterprise Service Prototype

- Built a Java/Spring Boot REST service prototype with a Python-based AI/ML component for natural-language request processing and intelligent automation; documented prompts, validation checks, and safe handling of application data.
- Containerized service components with Docker and structured Git/CI/CD workflows for automated build and test execution, demonstrating production-aligned AI-assisted software engineering practices.

Java 17 API Modernization & Automated Testing

- Migrated enterprise APIs from Java 7/11 to Java 17, refactored deprecated dependencies, and resolved compatibility issues while preserving existing service behavior.
- Designed JUnit regression tests reaching approximately 95% code coverage and performed deployment validation to reduce modernization risk and maintain production stability.

Cloud Data Pipeline & Analytics API

- Developed a Python, Pandas, and SQL data pipeline to clean, transform, and model operational data, then exposed curated metrics through a REST API for downstream analytics use.
- Implemented data-quality checks and reusable transformation logic and prepared the solution for containerized/cloud deployment, strengthening data engineering and API integration experience.

Splunk Application Observability Dashboard

- Designed Splunk dashboards and custom log queries to centralize application health, error trends, and performance indicators across legacy services, accelerating production troubleshooting.
- Converted recurring log patterns into actionable operational views for engineering teams, complementing backend development with monitoring and observability capabilities.

TECHNICAL SKILLS

Programming Languages: Java, Python, SQL, JavaScript, TypeScript

Frameworks & APIs: Spring Boot, REST APIs, React.js, Node.js, JUnit, Pandas, NumPy

Database Management Systems: MySQL, MongoDB, Data Modeling, Data Pipelines, Analytics

Cloud & DevOps: AWS, Docker, Kubernetes, CI/CD, Containerization, Git, GitHub, Bitbucket

SDLC & Methodology: Agile, Scrum, Software Development Lifecycle (SDLC), Functional Programming, AI-Assisted Development, Prompt Engineering

CERTIFICATIONS

Google Data Analytics Professional Certificate – May 2026

AWS Cloud Practitioner Essentials, Amazon Skill Builder – Jun 2025

Google Cloud Fundamentals: Core Infrastructure, Coursera – Jul 2025
